

A SMALL TARGET. A REPEATABLE PROCESS.

Vest ATM.

TRADE. REALIZE. WITHDRAW.

The aim is not one enormous screenshot.
It is a series of realized profits moved
out of the trading account.

THE LOGIC

One defined setup.
One planned exit.
One claimable result.

WHY THE LOOP FITS VEST

01

CLAIM FREQUENTLY

Vest states no cap on claim frequency or claim amount.

02

SEPARATE THE CASH

Claim to Primary, then withdraw USDC to your external wallet.

03

KEEP IT REPEATABLE

A modest target makes the execution plan easy to measure.

THE CASHOUT CYCLE

SETUP

REALIZE

CLAIM

WITHDRAW

Then wait for the next valid setup. Repetition is earned, not forced.

Withdrawn funds are outside the next trade. Losses still reduce account equity; recover a deficit before treating the next win as a fresh payout. Vest currently lists 24-hour claim processing. Claiming and external withdrawal are separate.

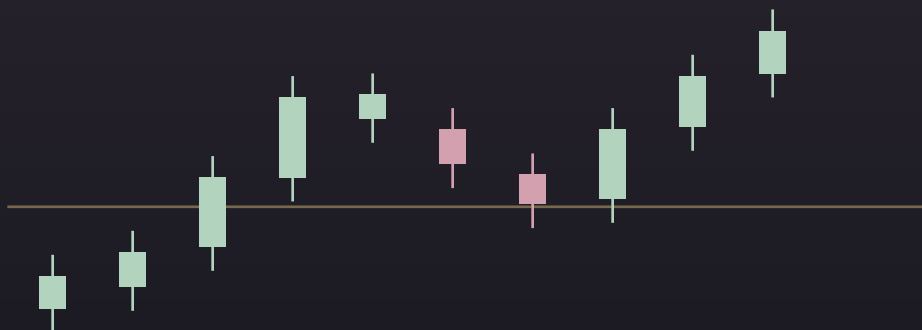

THE EXECUTION / NQ ON VEST

Keep the trade beautifully simple.

30

30 PT TARGET / 30 PT STOP / SIZE BEFORE ENTRY

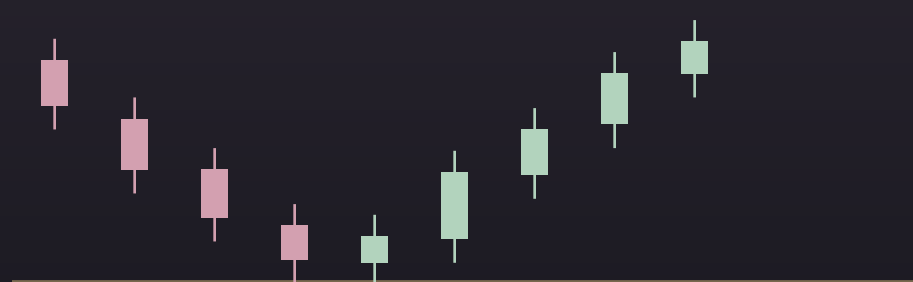

A / IMPULSE + RETEST

Break the level. Let the pullback hold.
Enter on a close back with the impulse.

LONG SCHEMATIC / REVERSE FOR SHORTS

B / LEVEL + REJECTION

Mark the level first. Wait for rejection.
Enter on a close away from that level.

LONG SCHEMATIC / REVERSE FOR SHORTS

IF THE IDEA NEEDS MORE THAN A 30-POINT STOP, PASS ON THIS SETUP.

LONG EXAMPLE

ENTRY 30,000

TAKE PROFIT

30,030

STOP LOSS

29,970

THE 250 QUESTION.

\$8.33 per point x 30 points is about \$250 gross, before costs and your split.
To target 250 USDC after the split, work backwards from what you receive.

\$/POINT = (250 / SPLIT + TOTAL COSTS) / 30**10.68** \$/pt

EXAMPLE: 80% SPLIT / \$8 COST ALLOWANCE

Win ~\$320.50 - \$8 = \$312.50; your share ~\$250.

30-point loss: ~\$328.50 including that same allowance.

Illustrative costs only. Recalculate fees + spread/slippage for your actual size.

Set TP/SL from the actual fill. Check the fail floor and execution costs.

Leverage sets margin; position size sets dollars per point. A 1:1 price target
is worse than 1:1 after costs. Stops can slip; this plan has no proven win rate.

MAKE YOUR NEXT MOVE.
